Hamza Jameel

React Native Engineer · iOS & Android · Native Modules (Kotlin / Swift)

Lahore, Pakistan | hamzajameel188@gmail.com | linkedin.com/in/hamzajameel188 | github.com/HamzaJameel01

hamzajameel01.github.io

Summary

React Native engineer (3.5+ years) shipping iOS and Android apps end to end, from architecture to store release. Writes native Kotlin and Swift modules when the platform demands it, and maintains an open-source React Native package used in production. Track record: 99.4% crash-free users, 2x faster startup, and 3 apps built from scratch in 4.5 months.

Experience

React Native Developer, Coding Pixel – Lahore, Pakistan — Jan 2026 – Present

- Built 3 apps from scratch in 4.5 months (Steel Angel, Growzie, Fitworks), owning each end to end, from architecture to delivery.
- **Steel Angel** (crash detection): fused accelerometer and gyroscope at 50Hz (RxJS) through a 3-second sliding-window algorithm to detect impacts, tip-overs and falls; tuned over real rides until bumps and potholes stopped triggering false alerts.
- Engineered Steel Angel's offline emergency flow: "Are you OK?" countdown, then GPS-tagged SMS through a native Kotlin SmsManager module (3-attempt retry) plus FCM alerts, with a foreground service for background monitoring. Open-sourced the SMS module (see below).
- **Growzie** (native iOS, Swift): cut location-feed query cost roughly 4x by replacing geohashing with Firestore multi-field range queries (bounding box + CoreLocation filtering); added Universal Links and Firebase Auth.
- **Cattle Worth** (native Kotlin + Swift; **Play Store** | **App Store**): re-implemented the yearly subscription flow end to end on both platforms, with Google Play Billing (Android) and StoreKit (iOS).
- **Fitworks**: building a multi-role (Head Coach / Coach / Client) app on React Native 0.78 New Architecture, React 19 and TypeScript, with role-gated navigation, MMKV session rehydration and a real-time NestJS + Socket.IO backend.
- Set up a CI/CD pipeline with GitHub Actions to build automatically on every push.

Software Engineer, Viral Square – Lahore, Pakistan — Mar 2024 – Jan 2026

- Joined as Associate Software Engineer; promoted to Software Engineer in Mar 2025.
- Led React Native development on **Iqleel** (formerly Nawaah), an adaptive early-learning app (Math and ELA, PreK–3), as one of two RN developers; built the core app: practice/quiz, study plans, teacher analytics and payments.
- Cut app startup time roughly in half by migrating storage to MMKV and lazy-loading heavy modules.
- Built 60 fps Reanimated and Lottie animations synced to audio for coordinated audio-visual feedback.
- Integrated Stripe subscriptions with saved cards (PaymentSheet + SetupIntent).
- Mentored 2 junior developers and led code reviews, sustaining a 99.4% crash-free user rate.

Junior React Native Developer, ProjectZ – Lahore, Pakistan — Feb 2023 – Mar 2024

- Shipped 6 features each across two live apps: **Football Around Me** (**Play Store** | **App Store**) and **HomeSifu**, an AIoT property-management app (**Play Store** | **App Store**).
- Implemented map clustering on a 100-marker screen, eliminating pan-and-zoom lag.
- Integrated Facebook SDK login/sharing and 8 location-based REST endpoints.
- Structured navigation (React Navigation) and global state (Redux Toolkit) for predictable data flow.

Open Source

react-native-background-sms – published on npm · MIT · **npm** | **GitHub**

- React Native SMS library with native Kotlin (Android) and Swift (iOS) modules: silent background send on Android (pre-filled compose sheet on iOS, where Apple blocks silent sending), multipart messages, multi-recipient handling and delivery tracking. Runs in production as Steel Angel's emergency-alert engine.

Technical Skills

Languages: JavaScript, TypeScript, Kotlin, Swift
Mobile: React Native, Expo, React Hooks, iOS & Android, native module bridging, React Navigation, Reanimated, Gesture Handler, Lottie, Drax, Push Notifications (FCM / Notifee), Google Maps & map clustering, CoreLocation, Universal Links
State & Data: Redux Toolkit, Redux, React Query (TanStack Query), Context API, RxJS, MMKV, AsyncStorage
Backend & Cloud: Firebase (Auth, Firestore, Storage, Cloud Messaging), Node.js, Express, NestJS, REST APIs, Socket.IO
Payments: Stripe (PaymentSheet, SetupIntent, saved-card subscriptions), In-App Subscriptions (Google Play Billing, StoreKit)
Quality & Delivery: Jest, React Native Testing Library, GitHub Actions, Git, code reviews, Agile / Scrum
Tools & Release: Xcode, Android Studio, App Store Connect, Google Play Console
Performance: startup and render optimization, lazy loading, profiling
Spoken: English (Fluent), Urdu (Native)

AI-Assisted Development

Tools: Cursor, Claude Code, ChatGPT (daily use)

- Use AI across the workflow (scaffolding, refactoring, debugging, writing tests and documentation) to ship features faster; review and verify all AI-generated code before merging.
- Use AI cost-efficiently: manage context (compacting or clearing it between tasks) to keep token usage low, and match the model to task difficulty, using lighter models for routine work and stronger ones for complex problems.

Education

B.S. Computer Science, Superior University – Lahore, Pakistan — Aug 2018 – Aug 2022
MERN Stack Bootcamp (PSEB / PASHA), Contour Software – Lahore, Pakistan — Oct 2022 – Jan 2023

- Built a full-stack Exercise Tracker (React, Express, Node.js, MongoDB) with 6 REST endpoints.
